Abstract

In this paper, we propose the upper bound for the cardinality of continuum.

MSC: 03E17, 03E50

Keywords: set theory, continuum, cardinal numbers

1 Introduction

Cohen [Coh63, Coh64] showed that the continuum hypothesis (CH) is independent of Zermelo-Fraenkel axioms with the axiom of choice (ZFC). Our motivation is to find the hypothetical size of continuum.

2 Results

First, we define that $\aleph_Z := 2^{2^{\aleph_0}}$. We know that $2^{\aleph_0} < 2^{2^{\aleph_0}}$. Then we claim that

$$2^{\aleph_0} < \aleph_Z. \tag{1}$$
