

A simple explanation of basic physical and spiritual differences between races based upon solar energy.

Abstract

I give an explanation for why negroes are more spiritual, “lazy”, strong and clever than white people are.

1 Introduction.

I give a rational explanation, from elementary physics, why Africans are black from the point of view of survival. Next, I explain the ramifications; that is why they are lazy during the day, more spiritual by nature and more intelligent in a way than white people are. This is not in contradiction with the fact that white people had more success and it is explained why black people with a white education could be the next generation of world leaders.

2 The physics behind it all.

White and black are colours but they are not pure, it means they do not have a definite wavelength; rather, they constitute a particular statistical mixture of different wavelengths in the visible spectrum. The reason why the mixture is such and such is explained by Fermi and Bose statistics as well as elementary thermodynamics using the principle of maximal entropy of a gas or plasma at a given temperature. Black body radiation has a peak in the deep infrared, whereas white is higher peaked and therefore corresponds to higher average energies. This means that black people *lose* and radiate an electromagnetic density matrix with higher entropy than the light which has fallen in, which means that the entropy of the environment raises quite substantially suggesting the entropy of the negro lowers (but less than the entropy increase of the environment). This means that the internal, unstructured, energy of the black person lowers during

the day, under influence of the sun, and that he becomes more structured or lucid. According to me, this state of higher information makes him spiritually more energized while physically less since internal energy is like gasoline for the muscles. To survive therefore, and engage in a fight if necessary, he or she needs to be able to develop higher muscle power during a very short time since the endurance and therefore total amount of internal energy is less. Hence, black people are more muscular, which is associated to higher testosterone and a larger penis from the male side. They are like catlike predators, lightly sleeping during the day and fully awake in the evening. Hence, spiritual people love the sun, it is good for their brain but it makes them physically inept.

White people on the other hand also gain a bit of information in the sun but much less so, which makes them more active and explains why never a negro has won the tour de france or a tennis tournament like the australian open. They are, on the other hand, the champions of bodybuilding and 100 meter running as generations of Jamaicans have proven. So white people are less spiritual unless they are on coke or cannabis. Clearly, white, primitive people living in Africa would be whiped out by the natural predators due to lack of muscle power. So why are white people living far away from the equator less muscular? It is clear they are less spiritual, but their whiteness must have had another explanation. Indeed, people living far from the equator generally have cold nights which would make them weak, even if they were black and therefore they have to live optimally during the day which explains their whiteness even if they were initially black. Indeed, they have to eat and provide for it, something which requires *physical* effort and black people would in general be too lazy to cultivate the land and go for hunting. Instead, they do this in the early morning or late evening and perhaps even at night whereas most of them rest during the day. Given that white people are more physical and mechanical workers, science and the development of equipment naturally flourishes there more, not even mentioning the abundance of natural means due to the presence of forests and meadows to do so. One can see the ultimate culmination of this simple reasoning in the old Egypt where African strength and intelligence meets northern craftmanship. Belgians and even Britons were monkeys compared to the level of ingenuity displayed there at that time which really indicates that black intellectual potential is higher on average than the white one. Brown people are the future and were the past! This also explains why vikings and northern people are in general much more primitive, violent, mechanical and religious. Indeed, someone who lives in the spiritual world does not need to go to church in order to meet God, he or she experiences spiritual influence every day. On the other hand, church may serve as a means for black people to tame the spirits and therefore doing exactly the opposite as for white people. This is easily seen by the fact that the catholic church sells badly for negros while the baptist and evangelical churches do well. Northern people need extrastrong catholicism and a lot of opoide products, as evidenced by the lutherian churches. In the middle is Buddhism

which is the religion of the brown people.

Finally, there are the asian who are yellow. Now yellow is a pure wavelength so Chinese are immune to the sun, they can live everywhere. By nature, they are even more mechanical than white people are and indeed Chinese people are known as rigid, hard working and pretty group organized. They are not as intelligent than our Marrocan, Algerian and Egyptian friends; their culture booms with opoid products distributed by the emperor who was probably of mixed Azian-African ethnicity and wanted his people to become more spiritual. Such mixed etnicity comes with the Japanese who are yellow-brown and have a richer culture than the Chinese and a philosophy close to Buddhism but with an increased opium intake. So, all these features are simply explained by bachelor grade physics which underscores the point I try to make for years, which is that everyone needs to have a deep understanding of the basic laws of nature.
