

## The Academy of Advance Science and the Technological Sciences

Miguel A. Sanchez-Rey

The Academy of Advance Science and the Technological Sciences [AASTS] is an academy of higher learning that aims to educate and prepare the leading scholars in the Scientific Age. By pursuing academic research and scientific exploration meant to further their potential in the sciences. Eventually achieve leadership positions in the sciences, diplomacy, public policy-making, economics and scientific counsel, for both global military defense and PHPR [The Physicalist Program], to pave the way for the incalculable technological stage.

Admissions to AASTS will require the utmost qualifications in the sciences, early internship positions in government and/or the private sector or even several years of civic activism that has made a positive and constructive difference to their community, school or any organization or public institution.

Exceptions to any of the utmost qualifications for admissions will be deem at the discretion of AASTS in only the most extreme circumstances.

PHPR top-scientists are automatically granted leading faculty positions in AASTS. Free admissions can be granted at an early age that will result in higher qualifications of scientific achievement that ultimately leads to selection into PHPR once other qualifications are met in the PHPR Protocol.

PHPR is to be dismantled when the last task is completed. But AASTS is to continue on until AASTS unanimously agrees and officially declares the beginning of the incalculable technological stage.

By then AASTS is to be dismantled.
