Stargate on Hausman or Pin Oak Road, if one wants to make a stargate, one has to put two electromagnets about 100 to 300 feet and establish a high melectromagnetic current that goes from - to +, the higher the current the faster the Tesla car which is an electromagnet will travel from - to +, it is going left. While it may not appear that the distance is shorter, the fact is tha the time to get from A to B will be shorter. Note:Wouldn't the Blue rib bridge be this(Hausman)???? One just needs to run the current? SA and Austin (Near 6 th street???)
