

42, it's just a number

sgm, 20180520

he's not "the father of lies"

it's not even a "he"

nor is She

"Childhood is like a dance.."; you finish the rest

fear is THE enemy

so is "knee jerk"

that's why a machine shouldn't govern

there is no "pat answer"

but that doesn't mean you shouldn't look

On Wikipedia, the page:

[List_of_unsolved_problems_in_physics](#)

under "Cosmology and general relativity", there are 12 listed "problems": time, inflation, horizon, origin, size, asymmetry, constant, dark 3, axis and shape. They are problems depending on your perspective. Every good scientist worth his/her salt wants to know one thing more than anything: "the mind of God" relating to their field; "The pursuit of Truth" as Ellie's boyfriend said in Contact.

I just wrote to Dr. Peter Higgs yesterday about a "hybrid framework" that could answer some of those questions. I rarely correspond with anybody "at the top" of the heap. I feel it's presumptuous. So I kept apologizing for the intrusion. But I guarantee you that if I'm right, this will inspire him as much as any grandchild would.

And I don't say "if I'm right" assuming I am; I assume I'm wrong and wait for the evidence; then typically I'm astounded by the off-chance I stumbled onto the Truth, that

evasive Bitch .. Sometimes I feel like I'm a drunk stumbling down a dark and dangerous alleyway, feeling my way among the filth and garbage. Then there it is; a #& %*ing **huge** diamond nobody noticed. Could it be real? It's most likely a fake, right?

In developing the framework, I noticed some of the 12 problems are answered by the framework because of its nature: a hybrid description of a heterogeneous universe. It makes sense but is about as inelegant as an old skanky whore bending over to pick up a used cigarette butt.

"Here goes .. g is not mediated by the g_n as mass is not mediated by the H_b ; the sf and g are both mediated by tc . The wf is not mediated by ivb ; it's not really a force; it's a **process** where unstable nuclei fall apart based on a **nuclei-dependent** stability function, sf . Protons don't decay because their $sf=1$. The ndp exists because various kinds of neutrinos have $sf<1$." "Visualize time like a rubber band that can only be stretched or compressed. I call that temporal elasticity. The presence of matter compresses time locally; the presence of antimatter does the opposite. Gravitation can be simplified to depend exclusively on this. So can the strong force. A bonus unification is Special Relativity."

Baryon asymmetry is an illusion. I'm guessing anything relating to "dark something" is too. That implies most of the 12 above are due to inappropriate perspective. If I've learned anything from engineering, it's about re-framing: if we can't solve problems, it's because our assumptions are incorrect or we're asking the wrong questions.

I take a step back and try to figure out why she's bending over - why it's taking so long for her to pick it up. Past lives flash before my eyes. My heart flutters. My vision blurs, tears brimming. No longer old and stinky, She takes my hand and we walk for a while.

By the way: what's the answer to life, the universe, everything? Life is not a question; it's a process like anything else.

Care for a pint? Or three?
