

Anticipatory Shock in the Global Economy

The Leading Professor Miguel Angel Sanchez-Rey [*The Grandmaster, The Master of Space-Time*]

The Academy of Advance Science and the Technological Sciences

Social democratic norms have kept world affairs relatively stable throughout the industrial and developing economies. Since then, with the collapse of the European Union and the permanent decline of the religious state, higher yields in inflation implies that demand is relatively stable. But with deflationary policies, and a trade dispute across the other side of the pacific, purchasing power has begun to fall -- with increasing demand becoming more ominous. Meaning that higher prices makes purchasing power of goods and services inadequate. Such that New Keynesian policies, with the declining state and government sector, becomes inadequate in restoring purchasing power to sustain a growing world-wide economy. With the breakup of the European Union, the beginning of the corporate governorship in the U.S., the breakdown in the Common Wealth of Nations, and the wide-spread panic of the Commons (that has led to a growing immigration crisis on U.S. soil) means the permanent demise of social democratic norms and the toppling of New Keynesian economic policy. Implies that the only way out is to *fully abandon the international norm and to adopt the internationalist model*, for the preservation of necessary economic policy that mandates economic development and interdependence that preserves what remains of the central banks – in order, to justify federalist policies and free-trade agreements, that are essential for continual global economic growth. Either way, lasting damage has been inflicted to social democracy.
