# Light Velocity Effect On Solar System Geometry <br> Gerges Francis Twadrous <br> $2^{\text {nd }}$ Course Student - Physics Department - Physics \& Math Faculty Peoples' Friendship University - Moscow - Russia -2010-2013 <br> TEL +201022532292 mrwaheid@gmail.com / georgytawdrous@yandex.ru 

## Abstract

## Paper Hypotheses

## (I) Light Velocity

1- There are 2 light velocities work in the solar system. Which are light known velocity ( $=0.3 \mathrm{mkm} / \mathrm{sec}$ ) and light supposed velocity ( $=1.16 \mathrm{mkm} / \mathrm{sec}$ )

2- Light supposed velocity ( $1.16 \mathrm{mkm} / \mathrm{sec}$ ) creates the distance by its motion $($ where Space $=$ Energy $)-$

3- Planet Matter is created from the distance energy - that explains the relationship between Planet Matter (diameter or mass) with its orbital distance

4- Planet Matter is created from distance energy (Space =Energy) by relativistic effects help (specifically based on length contraction effect the distance energy give a birth for a matter)

5- Matter is relative to Light known velocity $(0.3 \mathrm{mkm} / \mathrm{sec})$, (equation $\mathrm{E}=\mathrm{mc}^{2}$ supports that). That's why our 5 senses (material senses) can't discover or realize any other light velocity than the known one ( $0.3 \mathrm{mkm} / \mathrm{sec}$ ) - and that's why the light known velocity $(0.3 \mathrm{mkm} / \mathrm{sec})$ is the highest in our universe (Matter Universe)

6- Means... the light supposed velocity ( $1.16 \mathrm{mkm} / \mathrm{sec}$ ) is always around us but we can neither discover nor realize it because our senses are limited to the known one ( $0.3 \mathrm{mkm} / \mathrm{sec}$ )

7- Light known velocity $(0.3 \mathrm{mkm} / \mathrm{sec})$ is produced from the original one (1.16 $\mathrm{mkm} / \mathrm{sec}$ )

## (II) Energy Transportation

8- The Solar Group is created from one energy- this energy (light with supposed velocity $1.16 \mathrm{mkm} / \mathrm{sec}$ ) creates Planets matters, orbital distances and the light known velocity ( $0.3 \mathrm{mkm} / \mathrm{sec}$ )

9- The solar group is one trajectory of energy - and each planet is a point on this same trajectory -

10- That means the Energy is transported from point to another point through the solar system - and that explains Planets Data Dependency where all solar planets data is created relative to each other because they are created from one source (one energy)

11- Energy Transportation process should be a crucial proof for this theory -in this paper we should follow energy transportation process details to prove it.

## Primary Conclusion

## All Solar Planets Data Is Controlled By One Equation Only

Because all planets data is created relative to each - where all data is created from the same source (the same energy) -
i.e.

All data is relative to each other and one Equation only controls all of them i.e.
(If I know this Equation and I know just Earth Diameter - as example-, based on this Equation I can conclude Uranus diameter, Mars axial tilt or even Pluto mass.... Any other data I can conclude this equation)

In this Paper we follow the Energy Transportation process to prove it's a fact Also the paper tries to prove all previous hypotheses

## 1-Intorduction

## Solar System Main Features

- Solar system and planets are created based on energy of light motion for 1 second
- Energy of Light motion for 1 second causes planet to move for 1 solar day
- Energy of Planet motion for 1 solar day creates the solar planets and their distances
i.e.
- We have a group of gears work here.... Light motion for 1 second whose energy creates planet motion for 1 solar day

How that can be possible...?

- Through the motions gears- for example planet motion uses energy of light motion for 1 second to produce planet motion for 1 minute - then another planet uses the energy of 1 minute to creates a planet motion for 1 hour- and third planet uses the energy of one hour motion to create a planet motion for one solar day....! Now this group of gears are working continuously ... we will see only planets move in their cycles but these planets cycles create the solar day time parts

Far from this theory details ... how to prove it?
(1)

- Pluto Motion for 1 solar day $=406000 \mathrm{~km}=$ solar planets diameters total
(2)
- Light supposed velocity for 1 second $=1.16 \mathrm{mkm}+$ light know velocity for 1 second $=0.3 \mathrm{mkm}-$ the total $=1.46 \mathrm{mkm}$ Per Second
But
- The value $1.46 \mathrm{mkm}=\pi \times 0.4665 \mathrm{mkm}$ (Neptune Daily Velocity)
i.e.
- Light beam motion for 1 second (2 light velocities together) create Neptune Motion for 1 solar day

## Conclusion

It's truth that - the solar system is created based on energy of 1 second motion of light beam - this claim proves need only to analyze solar planets data and follow the energy transportation through the solar system,
By this following we can prove clearly that
(1)

Energy is transported through the solar system which creates the planet matter and orbital distance
(2)

This energy is energy of light supposed velocity $1.16 \mathrm{mkm} / \mathrm{sec}$ travels for 1 second (3)

Planet motion for 1 day depends on light motion for 1 second

https://nssdc.gsfc.nasa.gov/planetary/factsheet/
The previous table is Nasa Planetary Fact Sheet - Metric - it's the only source I use for Solar Planets Data

1. I analyze Solar Planets Data to reach the geometrical rules on which this data is created - for example - If we have a right triangle its dimensions 3,4 and 5 , can we use these dimensions to conclude the Pythagoras rule? Yes we can - similar to that I analyze the planets data to reach their geometrical rules

Gerges Francis Tawadrous/ 4
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia.. mrwaheid1@yahoo.com mrwaheid@gmail.com
+201022532292
2. I depend on Data Direction

$$
\frac{\text { 25.2 Mars axail tilt }}{23.4 \text { Earth axail tilt }}=\frac{26.7 \text { Satrun axail tilt }}{25.2 \text { Mars axail tilt }}=\frac{28.3 \text { Neptune axail tilt }}{26.7 \text { Satrun axail tilt }}=1.0725
$$

This equation is hard to explain - but what's the basic idea here? There's a dependency between these 4 planets axial tilts... this conclusion is the Data Direction
3. I suppose there's one Equation only controls all solar planets data - that means - the previous table is controlled by one Equation only...(my Basic Hypothesis)
To explain this hypothesis I provide the following solar system alternative description which is a part of my methodology...

## Solar System alternative Description

1- The solar group is one trajectory of Energy and each planet is a point on this same trajectory
i.e.

2- The Solar Group is One Building and each planet is a part of this same building-
3- Also the solar group is similar to a train and each planet is a carriage of it.
4- Also the solar group can be similar to one body, and each planet is a member in it
5- Also the solar group can be similar to one machine and each planet is a gear in it

## means

6- When a planet moves -it doesn't mean this planet moves individually and independently from the other planets- NOT TRUE - The Planet moves with all other planets together as a train moves with all carriages -

## Description Basic Concept

## Planets Cooperation And Integration Is The Reason Of Their Existence And Motions.

## How to understand that?

WE know that the matter is created of Energy ( $\mathrm{E}=\mathrm{mc}^{2}$ ) - but How The Space Is Created? I suppose the Space is created of Energy also... $($ Space $=$ Energy $)$
So the matter and space both are created from the same energy.. Based on that the solar group can be one trajectory of Energy
Can that be possible?
Energy has different forms (sun rays - nuclear interactions - oil- food ..etc)
Different forms for same content, i.e. it's possible to create matter \& space of energy

## Another Example

In double slit experiment (Young Experiment) - the light coherence produced bright and dark fringes -regardless the experiment explanation - the experiment tells "when one input is used (light)- the outputs can be in 2 different forms (bright and dark fringes)"

## The Solar Group Creation

I suppose the solar group is one energy creates the planet matter and orbital distance - so this same energy passes through the whole group to create all solar planets and their orbital distances from the same energy where this energy creates all planets data complementary to each other because all of them are created from the same source.

## Shortly

The solar group is one thread - as one necklace - all solar planets and their distances are created from one energy to be complementary to each other- and that's why the planets data analysis shows the solar planets dependency.
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## 3-Energy Transportation Process Proves

3-1 Planets Axial Tilts
3-2 Distances Equality
3-3 Matter Creation Process

## 3-1 Planets Axial Tilts

## I-Data

Equation No. (1)
$\frac{\text { 25.2 Mars axail tilt }}{\text { 23.4 Earth axail tilt }}=\frac{\text { 26.7 Satrun axail tilt }}{\text { 25.2 Mars axail tilt }}=\frac{28.3 \text { Neptune axail tilt }}{26.7 \text { Satrun axail tilt }}=1.0725$

## II-Discussion

How to explain Equation No. (1)? Let's try to do that in following:
(I have claimed that - there are relativistic effects in the solar group - and based on that - the rate 1.0725 is found as length contraction effect rate)

- Neptune Axial Tilt 28.3 degrees is the master value in this equation because Neptune reflected Jupiter energy toward the solar inner planets
- Neptune Axial Tilt 28.3 degrees will be contracted with the rate 1.0725 to produce 26.7 degrees (Saturn Axial Tilt) (and that may explain why Neptune orbital distance $=$ Saturn Orbital Distance x $\pi$ )
Then
- Saturn Axial Tilt 26.7 degrees will be contracted by the same rate (1.0725) to produce 25.2 degrees (Mars Axial Tilt) (that may explain Why Mars Orbital Circumference $=$ Saturn Orbital Distance $=1433.5 \mathrm{mkm})$
Then
- Mars Axial Tilt 25.2 degrees will be contracted (1.0725) to produce 23.4 degrees (Earth Axial Tilt) (that explain Why Earth Orbital Distance = Earth Mars Distance x Mars Orbital Inclination)

For Relativistic Effects Discussion Please Review
A Summary Of My Research -Part 3- (Relativistic Effects Discussion)
http://vixra.org/abs/1907.0523

## A Conclusion

The Energy must be transported between these 4 planets axial tilts which supports the claim that Energy is transported through the solar system
And
Based on the energy transportation process - the planets data be in consistency relative to each other as we have seen
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## 3-2 Distances Equality

## I- Data

## Group No. 1

- Mercury Neptune Distance = Saturn Pluto Distance
- Mercury Saturn Distance = Neptune Pluto Distance
- Saturn Orbital Distance $=$ Saturn Uranus Dis. $=$ Mercury Orb. Circum.

## More Data

- Mercury Jupiter Distance
- Earth Neptune Distance
- Jupiter Uranus Distance
- Jupiter Pluto Distance
- Uranus Pluto Distance
- Neptune Orb. Distance
- Pluto Orbital Distance

$$
=\text { Mars Orbital Distance } \quad \mathrm{x} \pi
$$

$=$ Mercury Saturn Distance $\mathrm{x} \pi$
$=$ Venus Jupiter Distance $\quad \mathrm{x} \pi$
$=$ Uranus Neptune Distance $\mathrm{x} \pi$
$=$ Earth Orb. Circumference $\mathrm{x} \pi$
$=$ Saturn Orb. Distance $\quad \mathrm{x} \pi$
$=$ Earth Orb. Circumference $\quad \mathrm{x} \pi$

## Why These Distances Are Equal?

## Group No. 2

1. $\frac{\text { Earth Daily Motion } 2.58 \mathrm{mkm}}{\text { Moon Orbital Circumference } 2.41 \mathrm{mkm}}=1.0725$ (No Error)
2. $\frac{\text { Apogee orbital radius }(406000 \mathrm{~km})}{=1.0725}$ (No Error)
3. $\frac{778.6 \mathrm{mkm} \text { Juppiter Orbital Distance }}{720.3 \mathrm{mkm} \text { Jupiter Mercury distance }}=1.0725$
4. $\frac{720.3 \mathrm{mkm} \text { Jupiter Mercury distance }}{670 \mathrm{mkm} \text { Jupiter Venus Distance }}=1.0725$
(No Error)
5. $\frac{670 \mathrm{mkm} \text { Jupiter Venus Distance }}{629 \mathrm{mkm} \text { Jupiter Earth Distance }}=1.0725$
6. $\frac{\text { Saturn Orbital Distance }(1433.5 \mathrm{mkm})}{\text { Sarurn Venus Distance }(1325.3 \mathrm{mkm})}=1.0725$
(Error 0.8\%)
7. $\frac{\text { Saturn Earth Distance }(1284 \mathrm{mkm})}{\text { Sarurn Mars Distance }(1205.6 \mathrm{mkm})}=1.0725$
8. $\frac{\text { Uranus Orbital Distance }(2872.5 \mathrm{mkm})}{\text { Uranus Mars Distance }(2644 \mathrm{mkm})}=1.0725$
(Error 0.7\%)
9. $\frac{\text { Jupiter Orbital Circumference }(4894 \mathrm{mkm})}{\text { Neptune Orbital Distance }(4495.1 \mathrm{mkm})}=1.0725$
(Error $1.5 \%)$

## Why These Distances Are Not Equal?

## II - Discussion

Let's summarize the idea in following..

## Group No. 1

## Why These Distances Are Equal?

Because
Any 2 equal distances are created as 2 light beams - an original light beam and a reflected light beam
The original and reflected beams are equal in length - that's why these distances are equal each other

The previous explanation is so simple one - and we need more deep analysis to see the complete geometrical structure because many distances used $(\pi)$ which tells us that the equality depends on more complex process than the direct reflection

## Group No. 2

## Why These Distances Are NOT Equal?

Because
There are relativistic effects in the solar system- now the relativistic effects are different from point to point why? Because the energy is seen in light beam form or in matter form - that means we have more than one frame in the solar group If one distance is located in some frame and its reflected distance is found in another frame that will create length contraction effect
Which shows the 2 distances as 2 values with a rate 1.0725 between both (Or other rates - as we have discussed before -71 or 7.1 are length contraction rates also)
That explains why these distances are not equal

## Conclusion

Previous data with its discussion tell us that - the energy is transported from point to another point through the solar system
And based on Energy transportation the distances became equal or rated with defined rate
The previous data is a real proof for my claim
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## 3-3 Matter Creation Process <br> I-Data

* 720.7 mkm (Mercury Jupiter Distance) $=(71)^{2}$ x 142984km (Jupiter Diameter)
* 1205 mkm (Mars Saturn Distance) $=(71)^{2} \times 2 \times 120536 \mathrm{~km}$ (Saturn Diameter)
* 50.3 mkm (Mercury Venus Distance) $=(71)^{2}$ x 2 x 4879 km (Mercury Diameter)
* 119.7 mkm (Venus Mars Distance) $=(71)^{2} \times 2 \times 12104 \mathrm{~km}$ (Venus Diameter)
* $\pi \times 41.4 \mathrm{mkm}\left(\right.$ Venus Earth Distance) $=(71)^{2} \times 2 \times 12756 \mathrm{~km}$ (Earth Diameter)
* $108.2 \mathrm{mkm}\left(\right.$ Venus Orbital Distance) $=(71)^{2} \times 21346 \mathrm{~km}$ (Mars Circumference)
* 1622.7 mkm (Uranus Neptune Distance) $=(71)^{2} \mathrm{x} 2 \mathrm{x} 160592 \mathrm{~km}$ (Uranus Circumference)
* 778.6 mkm (Jupiter Orbital Distance) $=(71)^{2} \mathrm{x} 155597 \mathrm{~km}$ (Neptune Circumference)
* 17.4 mkm $=(71)^{2} \times 3475$ km Earth Moon Diameter (Previous Data Max Error 1.6\%)
* $78.3 \mathrm{mkm}($ Earth Mars Distance $)=(71)^{2} \times 7511.4 \mathrm{~km}$ (Pluto Circumference)
(Error 3.2\%)

## II- Discussion

Planet Diameter Creation rule can be concluded easily from the previous data

Let's remember the matter creation principle in following...

The matter is created from distance energy by length contraction effect - but not only- the matter also is created based on the quantum measurement as we know perfectly - for example in double production experiment - gamma rays 1.2 Mev can produce electron and positron but Gamma rays 1 Mev can't
So -length contraction effect can be useful to produce a matter only if the energy equal the matter required quantum of energy

## Please note

The matter creation process uses double contraction $(71)^{2}$ - length contraction rate 71 is produced by velocity $\mathrm{v}=0.9999 \mathrm{c}$ which I claim is found in the solar system (Earth registered velocity may support this claim where Earth velocity $=0.0001 \mathrm{c}$ which is a complementary velocity for 0.9999 c and together consist c velocity $(0.3 \mathrm{mkm} / \mathrm{sec})$ )

But Matter Creation uses $(71)^{2}$ - may that be the matter creation basic requirementbut we should notice that not all $(71)^{2}$ produce matters that because the matter is created based on quantum measurements - for that reason -
$86400 \mathrm{mkm}=(71)^{2} \times 17.2 \mathrm{mkm}$ - here the result 17.2 mkm still is distance form and don't produce matter - because the result isn't sufficient by quantum measurements
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## Deep Discussion

Let's return to the previous Data
Each planet is produced from specific distance which should be its most important distance - is it clear in the data? Let's discuss the first calculation in following:

## $720.7 \mathbf{m k m}$ (Mercury Jupiter Distance) $=(71)^{\mathbf{2}} \times 142984 \mathrm{~km}$ (Jupiter Diameter)

Mercury Jupiter Relationship is so strong - so the previous calculation expresses a real fact we know perfectly...let's review some of their Data

- Mercury during his day period moves a distance = Mercury Jupiter distance
- Mercury Diameter x $1 \mathrm{mkm}=$ Jupiter orbital circumference
(But $1 \mathrm{mkm}=1$ degree because mercury orbital circumference $=360 \mathrm{mkm}=360$ degrees)
- (Jupiter diameter $142984 \mathrm{~km}=1 \mathrm{mkm} / 7$ ) but we know that Mercury orbital inclination $=7$ degrees
- $(71)^{2}=5041$ but we know that Mercury Day needs 5040 seconds to be 176 solar days...

## Comment

Of course the geometrical mechanism will tell us how this data is created depending on each other - But even without this geometrical mechanism - the data left no doubt that Mercury \& Jupiter connected with each other more than to any other planet that's why Jupiter diameter is created based on Mercury Jupiter Distance

Let's use Calculation No. 2
1205 mkm (Mars Saturn Distance) $=(71)^{2} \times 2 \times 120536 \mathrm{~km}$ (Saturn Diameter)
Mars Orbital Circumference $=$ Saturn Orbital distance $=1433.5 \mathrm{mkm}$
There's no any other 2 planets in the solar system has this specific relationship So
The logical idea is that - Saturn Diameter is created based on his distance to Mars But why 2 diameters?!
The geometrical mechanism will tell us why...
Any way the value "2Saturn Diameter" is found frequently in the solar system For Example
We know that Mercury Day needs 5040 seconds to be 176 solar days...
But During 5040 seconds
Mercury moves a distance $=2$ Saturn diameter
Where
Mars moves a distance $=$ Saturn diameter
Now let's discuss the moon diameter creation in following
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## $17.4 \mathrm{mkm}=(71)^{2} \times 3475 \mathrm{~km}$ Earth Moon Diameter

(1)
17.4 degrees $\quad=$ Inner planets orbital inclinations total
17.4 degrees x $0.99=17.2$ degrees $=$ Pluto orbital inclination
(2)

We know that $1 \mathrm{mkm}=1$ degree because Mercury orbital circumference $=360$ $\mathrm{mkm}=360$ degrees
Now
Earth Moon Diameter ( 3475 km ) is produced by double length contraction effect based on the distance 17.4 mkm - why relating to this distance?
Because the moon diameter is a rate between other planets diameters (and distances)
The following data may explain my point of view as clear as possible

## Additional Data (1)

i. The Sun Diameter x The Moon Diameter $=$ Jupiter Orbital Circumference
ii. Jupiter Circumference x the Moon Circumference= Jupiter Orbital Circumference
iii. Mars Circumference x The Moon Circumference $=$ Mars Orbital Distance
iv. $43000 \mathrm{~km} \quad \mathrm{x}$ The Moon Diameter $=$ Earth Orbital Distance (Apogee Radius 0.406 mkm - Apogee radius $0.363=43000 \mathrm{~km}-$ so this is the distance which the moon can pass from perigee point ot apogee point - so we can call it - the moon motion freedom distance)
v. Venus Diameter x The Moon Diameter =Earth Venus Distance

## Additional Data (2)

The Moon Circumference $10921 \mathrm{~km} \times 27.3$ days $\quad=300000 \mathrm{~km}$
This equation tells is the moon rotates around his axis once daily - so during his orbital period will pass the distance which light pass during 1 second
The Moon Circumference 10921 km x 86400 seconds $\quad 940$ million km
This equation tells if earth revolves the sun a complete revolution in 1 day only so the moon circumference will be a distance of 1 second of Earth Motion
$43000 \mathrm{~km} \quad \mathrm{x} 27.3$ days $=\mathbf{1 . 1 6}$ million
This equation tells the energy of light motion for 1 second $=1.16 \mathrm{mkm}$ is divided between 43000 km (perigee apogee distance) and 27.3 moon orbital period - that means the energy defines the spacetime coordinates - and means - Spacetime coordinates isn't an empty coordinates - it's a coordinates made of energy so when we use energy for space we less the energy for time

## Conclusion

(1) Energy is Transported through solar group distances from Planet to another
(2) Matter is created from distance energy by double length contraction effect considering the matter quantum requirements
(3) Earth Moon is specific Planet in the solar system shows a direct relationship with light velocities and their energies

## 4- Pluto Energy is sent toward Earth and Moon

4-1 Pluto Motion depends on light motion energy (A summarized discussion)
4-2 Pluto Earth Relationship (A summarized discussion)
4-3 Period of time $=500$ seconds (Full Discussion)

## 4-1 Pluto Motion depends on light motion energy (Data Only)

## Main Idea

Energy of Light beam motion (with supposed velocity $1.16 \mathrm{mkm} / \mathrm{sec}$ ) for 1 second causes Pluto to move for 1 solar day ( $0.406 \mathrm{mkm}=$ Pluto Velocity Daily)
By Pluto motion energy for 1 solar day the solar planets are created

## Based on this idea

The rate $(1.16 \mathrm{mkm} / 0406 \mathrm{mkm})$ should control all planets basic data - is it truth?!
I-Data

mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## II- Discussion

The previous table shows different data which are example of many others One look at this table may support clearly the claim that
Solar planets data are created based on the rate $(\mathbf{A})=(1.16 \mathrm{mkm} / 0406 \mathrm{mkm})$
Let's summarize the table main features in following:

- The table uses many total values as (Outer Planets Axial Tilts Total 278.4 deg - 41 deg (planets orbi. inclinations total) and 511.1 deg (planets axial tilts total)...The using of such total values tells us easily that the rate (A) controls Planets Basic Data
- The table shows easily deep relationships between different planets such as (Jupiter Diameter 142984 km / Neptune Diameter 49528 km)=A This equation is important because Jupiter is the solar system main energy source and Neptune reflects Jupiter energy toward the inner planets - that's why both planets rated with the Rate (A)
- 655 mkm (Jupiter Saturn distance) /227.9mkm (Mars orbital distance) =A this equation is so important because Saturn connects between Jupiter and Mars - that means these 2 distances are created as a direct effect of the rate (A)

## Please Note

- Solar Planets Masses Total / 0.5 Jupiter Mass=A

And

- 41 deg (planets orbi. inclinations total) x 2/ Neptune axial tilt 28.3 deg

The previous 2 equation tells us there's some relationship between 2 and 1 - where the data uses 0.5 of Jupiter mass and double Planet orbital inclinations total - that tells we deal with 2 values relative to 1 another value... and we know the rule because
(a)

2 Jupiter diameters +1 Saturn diameter $=$ solar planets diameters total
(b)

2 Jupiter circumferences -2 Saturn circumferences $=1$ Jupiter diameter (c)

Saturn diameter - Jupiter radius $=$ Neptune diameter $\times 0.99$
The previous tells us that the relationship $(f(z)=2 x+1 y)$ is a basic rule in the solar system geometry (as we have discussed before) now the table 2 calculations supports this same claim -
This discussion is summarized - but the table data analysis can support the paper claim clearly and strongly

Let's move further.... to the following point
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## 4-2 Pluto Earth Relationship (Data Only)

## I-Data

- Earth Velocity $2.58 \mathrm{mkm} /$ day $=$ Pluto Velocity $0.406 \mathrm{mkm} /$ day $\quad \mathbf{x} 2 \boldsymbol{\pi}$
- Pluto Orbital Distance $5906 \mathrm{mkm}=$ Earth orbital circumference $940 \mathrm{mkm} \times 2 \pi$
- Pluto Day 153 hours = Earth Day 24 hours $\mathbf{x} 2 \boldsymbol{\pi}$
i.e.
$\frac{153 \mathrm{~h} \text { PLuto Day }}{24 \mathrm{~h} \text { Earth Day }}=\frac{29.8 \mathrm{~km}(\text { Earth Velocity })}{4.7 \mathrm{~km} \text { (Pluto Velocity) }}=\frac{\text { Pluto Orbital Distance } 5906 \mathrm{mkm}}{\text { Earth Orbital Circumference } 940 \mathrm{mkm}}=2 \pi$

## More Data

(1)

## 366000 km Outer Planets Diameters Total

2390 km PLuto Diameter
Note Please : 153 hours = Pluto Day
(2)

$$
\frac{153 \mathrm{~h} \text { PLuto Day }}{24 \text { h Earth Day }}=\frac{29.8 \mathrm{~km} \text { (Earth Velocity) }}{4.7 \mathrm{~km} \text { (Pluto Velocity) }}=2 \pi
$$

(3)

## $153 \times 7511.4 \mathrm{~km}$ (Pluto Circumference) $=\mathbf{0 . 9 9} \times 1.16 \mathbf{m k m}$

(4) Pluto orbital period $90560 \mathrm{~d} .=2 \pi^{3} \times 1461 \mathrm{~d}$. (Earth cycle $365+365+365+366$ )
(5) 17.4 deg (inner planets orb. inclinations To.) $\times 0.99=17.2 \mathrm{deg}$ (Pluto orb. Inclin.) ALSO 23.6 deg (outer planets axial tilts Total) x $0.99=23.4 \mathrm{deg}$ (Earth axial tilt)
(6) 122.5 deg. (Pluto axial tilt) $=23.45 \mathrm{deg}$. (Earth axial tilt) $\times 5.22 \mathrm{deg}$ (where 5.1 deg $=$ Earth Moon orbital inclination - error $2.5 \%$ )

## (7) $\mathbf{1 1 3 . 4 5} \mathbf{~ m k m}=\mathbf{1 . 1 6} \mathbf{~ m k m} / \mathrm{sec} \times 97.8$ seconds

## II- Discussion

This data we have discussed frequently ... the data strong similarity left no doubt that there's a relationship between Pluto on one side and Earth with her moon on the other side -
This relationship is a treasure because it's a suitable example for Energy transportation process - so this relationship analysis will show clearly how the energy is transported from any planet to any other planet...
Our task here is to analyze Pluto -Earth relationship to see how energy transportation process details... as I hope to do following
(Note $113.45 \mathrm{mkm}=1.16 \mathrm{mkm} / \mathrm{sec} \mathrm{x} 97.8$ seconds- where $113.45 \mathrm{mkm}=113.45$ degrees - but 113.45 degrees $=90$ degrees +23.45 degrees (Earth Axial Tilt) i.e. $113.45 \mathrm{deg}=$ Earth Axial Tilt vertically -it 's just example - Where Earth \& Pluto Data harmony we have discussed before)

## 4-3 Period of time $=500$ seconds (Full Discussion)

## I-Data

## Group No. 1

1- Light known velocity ( 0.3 mkm ) needs 500 seconds to pass Earth orbital distance ( 149.6 mkm )
2- $\mathbf{5 8 0} \mathbf{~ m k m}=\mathbf{1 . 1 6 ~ m k m} / \mathrm{sec} \times 500$ seconds

3- $\mathbf{5 8 0} \mathbf{~ m k m}+149.6 \mathrm{mkm}$ (Earth Orbital Distance) $=\mathbf{7 2 9 . 6} \mathbf{~ m k m}$ (Mercury Jupiter Distance) ( $\mathbf{1 \%}$ )
4- $729 \mathrm{mkm} \times 0.8=580 \mathrm{mkm}$ where $778.6 \mathrm{mkm} \times 0.8=\mathbf{6 2 7} \mathbf{m k m}$
5-
a- $580 \mathrm{mkm}=278.4$ days $\quad x 2.082 \mathrm{mkm} /$ daily (Mars Velocity Daily)
b- $580 \mathrm{mkm}=1433.5$ days $\times 0.406 \mathrm{mkm} /$ daily (Pluto Velocity Daily)
c- $580 \mathrm{mkm}=243$ days $\quad \times 2.41 \mathrm{mkm} /$ daily (Moon Orbital Velocity)
d- $580 \mathrm{mkm}=113.45$ days x $5.1 \mathrm{mkm} /$ daily (Earth + Moon Velocity Daily)

## Group No. 2

i. 580 days x $2.082 \mathrm{mkm} /$ daily (Mars Velocity Daily)= 1205 mkm (Mars Saturn Distance)
ii. 580 days x $1.1318 \mathrm{mkm} /$ daily (Jupiter Velocity Daily) $=655 \mathrm{mkm}$ (Jupiter Saturn Distance)
iii. 580 days x $3.02 \mathrm{mkm} /$ daily (Venus Velocity Daily) $=\pi \times 550.7 \mathrm{mkm}$ (Mars Jupiter Distance) (error 1.2 \%)
iv. 580 days x $4.095 \mathrm{mkm} /$ daily (Mercury Velocity Daily) $=\pi x 778.6 \mathrm{mkm}$ (Jupiter Orbital Distance) (error 3\%)
v. 580 days $\mathrm{x} 2.58 \mathrm{mkm} /$ daily (Earth Velocity Daily) x $2=3000 \mathrm{mkm}$ (Uranus Pluto Distance) (error 3\%)
vi. 580 days x $0.5875 \mathrm{mkm} /$ daily (Uranus Velocity Daily)= 2x 170 mkm (Mars Mercury Distance)
vii. 580 days x $0.838 \mathrm{mkm} /$ daily (Saturn Velocity Daily) $=2 \times 243 \mathrm{mkm}$
viii. 580 days $\times 0.406 \mathrm{mkm} /$ daily (Pluto Velocity Daily) $=237 \mathrm{mkm}$

## II-Discussion

Let's summarize the basic arguments in 2 points only
(1)

The value 500 seconds is transporting from Pluto to Earth as energy trajectory - because the distance is energy and time value can work as distance value (in relativistic effects form) - that means - the time is energy also (because it's equivalent for distance) - so this energy is transported from Pluto to Earth But

Not Directly but through other planets motions and data - means the value 500 is found in all solar planets
We find 500 seconds in Pluto and Earth Data as clear examples but this same value can be found with other solar planets
(2)

The value 580 mkm can be used as 580 days (time period) which proves
$\left(1^{\text {st }}\right)$ Time and Distance Values can be equivalent as relativistic effect
$\left(2^{\text {nd }}\right)$ the distance 580 mkm is a motion of light beam
Let's discuss the point no. $\left(2^{\text {nd }}\right)$ at first in following
(2 $2^{\text {nd }}$ ) The Distance 580 Mkm Is A Motion Of Light Beam
We agreed that time and distance values can be equivalent in relativistic effects
Please review
Time And Distance Equivalence (Proves)
http://vixra.org/abs/1904.0125
We know that $1.16 \mathrm{mkm} / \mathrm{sec}$ (light supposed velocity) x 500 seconds $=580 \mathrm{mkm}$ but
We see 580 mkm is used as 580 days frequently...let's review group no. 2

## Group No. 2

i. 580 days x $2.082 \mathrm{mkm} /$ daily (Mars Velocity Daily)= 1205 mkm (Mars Saturn Distance)
ii. 580 days x $1.1318 \mathrm{mkm} /$ daily (Jupiter Velocity Daily)= 655 mkm (Jupiter Saturn Distance)
iii. 580 days x $3.02 \mathrm{mkm} /$ daily (Venus Velocity Daily) $=\pi \times 550.7 \mathrm{mkm}$ (Mars Jupiter Distance) (error 1.2 \%)
iv. 580 days $\times 4.095 \mathrm{mkm} /$ daily (Mercury Velocity Daily) $=\pi \times 778.6 \mathrm{mkm}$ (Jupiter Orbital Distance) (error 3\%)
v. 580 days x $2.58 \mathrm{mkm} /$ daily (Earth Velocity Daily) x2 $=3000 \mathrm{mkm}$ (Uranus Pluto Distance) (error 3\%)
vi. 580 days x $0.5875 \mathrm{mkm} /$ daily (Uranus Velocity Daily) $=2 \mathrm{x} 170 \mathrm{mkm}$ (Mars Mercury Distance)
vii. 580 days x $0.838 \mathrm{mkm} /$ daily (Saturn Velocity Daily) $=2 \times 243 \mathrm{mkm}$
viii. 580 days $\times 0.406 \mathrm{mkm} /$ daily (Pluto Velocity Daily) $=237 \mathrm{mkm}$

Why the previous data is a proof? Because the planets with their real velocities produce real distances
Mars for example produces his distance to Saturn which is mars most important distance
(equation v uses number 2 in the equation because the working velocity contains Earth velocity +moon velocity and we know they move by equal velocity otherwise they may be separated from each other)
(equation vii produces 243 mkm "Mercury moves 243 mkm during its rotation period" so it's a real distance also)
(equation viii produces 237 mkm and we know that solar day $=237$ seconds of the sun rate of time - so the 237 seconds is seen here as 237 mkm - not very strange number for example we frequently dealt the value 86400 mkm which corresponds to 86400 seconds)

What we try to prove here?
The value 580 days is a working value in solar group geometry
Why this is important?
Because
The distance 580 mkm is produced from $1.16 \mathrm{mkm} \times 500$ seconds - so this calculation tells that the 580 is a distance $=580 \mathrm{mkm}$ but we see it here as 580 days that supports my claim "time and distance equivalent"
But more important

## It tells us that this motion ( 580 mkm ) is done by a light beam because it's seen by us as a time value

Group No. 1 of data shows how this distance 580 mkm (Energy) which is found by light motion ( $1.16 \mathrm{mkm} / \mathrm{sec}$ ) for 500 seconds
How this distance (Energy) is transported from point to another through the solar group
Where Group No. 1 is so complex because the solar planets are created relative to each other and their motions depend on each other - for that to see clearly the Energy transportation process will be a real complex analysis

But group No. 2 of data provides us a real treasure because it tells that - the distance is done by light and we see it as a time value because the light velocity creates relativistic effects for us
For Time And Distance Equivalence detailed discussion please review

## III-More Discussion

## Why There's A Relationship Between Pluto And Earth?

This question we know its answer
There's a light beam with velocity $1.16 \mathrm{mkm} / \mathrm{sec}$ is sent from Pluto to Earth transporting the energy...we have discussed that also.... But
(1) What Energy the light beam transports to Earth
(2) What does prove this transportation process?

Let's summarize the story in following:

## Main Idea

- To produce the sun rays we need the factor $c^{2}$ which $=90000 \mathrm{mkm}$ as we have discussed before
- The energy is sent from Jupiter to Pluto and reflected by Neptune in 2 trajectories of energy (each trajectory has 86400 mkm )
- We agreed that - by some delaying process the energy is accumulated to produce the value 90000 mkm - but with what mechanism?

Now we'll explain the mechanism ... The Required Energy $=\mathbf{9 0 0 0 0} \mathbf{~ M k m}$

- The available energy $=86400 \mathrm{mkm}-$ which is reflected from Neptune to the inner planets
i.e.
- The inner planets energy are reflected energies (not original) but reflected and now we need to add the original energy to the reflected one to produce the sun rays
- Mercury Orbital Circumference 360 mkm + Venus Orbital Circumference 680 mkm + Earth Orbital Circumference 940 mkm+ Mars Orbital Circumference $1433.5 \mathrm{mkm}=3413.5 \mathrm{mkm}$
- During 1433.5 days Pluto moves (Velocity daily 0.406 mkm ) a distance $=\mathbf{5 8 0} \mathbf{~ m k m}=\boldsymbol{\pi 1 8 7} \mathbf{~ m k m}$
- We have $3413.5 \mathrm{mkm}+$ (Pluto Contribution) $187 \mathrm{mkm}=3600 \mathrm{mkm}$

Total

$$
86400 \mathrm{mkm}+3600 \mathrm{mkm}=90000 \mathrm{mkm}=\mathrm{c}^{2}
$$

(why $90000 \mathrm{mkm}=\mathrm{c}^{2}$ because solar group motion depends on 1 second of light motion ( $1.16 \mathrm{mkm} / \mathrm{sec}$ ))
So, Pluto Contribution added 187 mkm which is necessary to produce the sun rays! Why? Because the sun rays are produced based on quantum measurements and the energy will not transfer into light beams unless this value 187 mkm is added otherwise the energy will still stored in distance form (where Space = Energy)
We have 2 questions here $\left(1^{\text {st }}\right)$ what does prove Pluto contribution? $\left(2^{\text {nd }}\right)$ why Pluto contribution depends on the value 1433.5 days (where Saturn orbital distance $=1433.5 \mathrm{mkm}$ )?
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## Basic Analysis

- Sun Diameter 1392000 km $=580$ x Pluto Diameter 2390 km
- $149.6 \mathrm{mkm}=500$ seconds $\times 0.3 \mathrm{mkm} / \mathrm{sec}$ (that means - light with known velocity $0.3 \mathrm{mkm} / \mathrm{sec}$ needs 500 seconds to reach Earth from the sun)
- $580 \mathrm{mkm}=500$ seconds $\times 1.16 \mathrm{mkm} / \mathrm{sec}$ (that means - light with velocity 1.16 $\mathrm{mkm} / \mathrm{sec}$ travels 580 mkm during the same 500 seconds) - that means we have here 2 light velocities work based on the same period of time - that's the basic reason which explains why Pluto data is similar to Earth data - because the data of both of them are created by light beams based on the same time period..

This story is so complex - we may refer to it shortly as possible

- $580 \mathbf{~ m k m}=590 \mathrm{mkm} \times 0.99$
- $590 \mathrm{mkm}=4.37 \mathrm{mkm}$ (The Sun Circumference) $\times 135.5 \mathrm{mkm}$ (this distance we have discussed before) - this equation tells that the value 590 mkm is so effective in the sun creation based on the distance 135.5 mkm - which we have discussed in the previous paper
Please review
Matter Creation Principle (Part IV) http://vixra.org/abs/1908.0289
But we know that- the sun creation depends on the distance 627 mkm (Earth Jupiter Distance) .....So
- $580 \mathrm{mkmx} 1.0725=627 \mathrm{mkm}$ (we know that the rate 1.0725 is lorentz length contraction rate) -

## Please review

A Summary Of My Research -Part 3- (Relativistic Effects Discussion) http://vixra.org/abs/1907.0523

For Distance 627 mkm - please review
https://www.academia.edu/40009799/Solar_System_Geometry_Summarized_Discus sion_- Part_3
(Please remember 5040 minutes (supposition) x $0.99=4989.6$ minutes
$4989.6 \mathrm{mx} 60=299376$ seconds - light with known velocity $0.3 \mathrm{mkm} / \mathrm{sec}$ passes a distance $=89812.8 \mathrm{mkm}$ during this period
$89812.8 \mathrm{mkm}=86400 \mathrm{mkm}+3413.5 \mathrm{mkm} \ldots$ where
$90000 \mathbf{m k m}=86400 \mathrm{mkm}+3600 \mathrm{mkm} \ldots$ that tells $\ldots$ there are other calculations done by light known Velocity ( $0.3 \mathrm{mkm} / \mathrm{sec}$ )

> Where

Jupiter orbital circumference $4900 \mathrm{mk}=3413 \mathrm{mk}+1433.5 \mathrm{mk}$ (Saturn orbit. Distance)
5040 seconds are required for Mercury Day to be 176 solar days
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheidl@yahoo.com mrwaheid@gmail.com +201022532292

## Why Pluto uses 1433.5 days to define his contributed distance?

## I- Data

(1)
$5906 \mathrm{mkm}($ Pluto orbital distance $)=4.095 \mathrm{mkm}$ (Mercury velocity daily) x 1433.5 days
(Where $1433.5 \mathrm{mkm}=$ Saturn Orbital Distance)
(2)
$\frac{41.4 \mathrm{mkm}(\text { Earth Venus Distance })}{0.406 \mathrm{mkm} \text { (Pluto motion Daily) }}=\frac{5906 \mathrm{mkm} \text { PLuto Orbital Distance }}{57.9 \mathrm{mkm} \text { Mercury Orbital Distance }}=\frac{2 \text { Satrun Diameter }}{\text { Pluto Diameter }}$
(3)

Saturn Diameter $=(7.1) \times$ Pluto Diameter
(4)
$580 \mathrm{mkm}=0.406 \mathrm{mkm}$ (Pluto velocity daily) $\times 1433.5$ days
Why Pluto contributed motion depends on 1433.5 days?
Because Saturn defines Pluto Orbital Distance
That's Why

## Mercury Saturn Distance $=$ Pluto Neptune Distance

And

```
Mercury Neptune Distance = Saturn Pluto Distance
```

The distances equal tells that the energy is transported from point to another but also tells us there's a geometrical reason by which Pluto orbital distance ( 5906 mkm ) can't prevent his effect on the inner planets motions - means - Pluto contribution is done basically because of this geometrical mechanism by which the distances are equal And that tells also - Pluto Contribution is real one

## Please Note

$25920 \mathrm{mkm}=7 \mathrm{mkm} \times 2 \pi \times 590 \mathrm{mkm}$
Where $7 \mathrm{mkm}=7$ degrees (Mercury orbital inclination) - the value 590 mkm we have discussed in the previous point - and we know that - the light with known velocity travels 25920 mkm during 86400 seconds (solar day) - that tells us the value 590 mkm is a basic value in the solar group geometry and it expresses Pluto effect on the sun rays creation process...
$2^{\text {nd }}$ Course student - physics Faculty - People's Friendship University - Moscow -Russia..
mrwaheid1@yahoo.com mrwaheid@gmail.com +201022532292

## Note Please

Based on 1 second of light motion the solar system is created?
How can we understand that? Or prove it?
28.3 degrees (Neptune Axial Tilt) (we have proved that in Energy Transportation Process Proves)

We use 28.3 seconds $x 1.16 \mathrm{mkm} / \mathrm{sec}=33 \mathrm{mkm}$
$(33 / 4)=8.25 \mathrm{mkm}=8.25$ degrees
Sun Obliquity to ecliptic $=7.25$ (deg.)
8.25 degrees -7.25 degrees $=1$ degree $=1 \mathrm{mkm}$ and in this cases $=1$ Second

This is the 1 second of light motion whose energy is used to build the solar system

## Note Please

## 625 seconds x $1.16=725 \mathrm{mkm}$ (Perfect Accurate)

That tells 625 mkm (Earth Jupiter Distance) and 725 mkm (Mercury Jupiter Distance) both are created based on the same light motion

## How Moon Perigee Radius is created?

0.406 mkm (Apogee radius) $=1.16 \mathrm{mkm} \times 0.35$ seconds $(=0.35 \mathrm{mkm})$
$0.35 \mathrm{mkm}+$ Earth diameter $=363000$ (Perigee Radius)

## Please Note

The Sun Diameter $\quad=\pi^{2} \mathrm{x}$ Jupiter Diameter
Saturn Diameter $\quad=\pi^{2} \times$ Venus Diameter
3600
$=\pi^{2} \times 365.25$
Earth Pluto distance $\quad=\pi^{2} \times 580 \mathrm{mkm}$
That tells $\pi^{2}$ is using for a geometrical reason-
