$$1 + 2 + 3 + 4 + \dots + \infty = \frac{1}{2} \infty(\infty + 1)$$

$$\frac{1}{2} \infty(\infty + 1) = \frac{1}{2} \times (-2) \times (-2 + 1) = 1$$

$$1 = \frac{1}{1} = -\frac{4}{6} = -\frac{2}{3} = -\frac{2}{8} = -\frac{1}{4}$$

$$1 = 1^1 = (81)^1 = (81)^{-\frac{1}{4}} = \frac{1}{3}$$

$$\frac{1}{3} = \frac{4}{12} = -\frac{1}{12}$$

$$\therefore 1 + 2 + 3 + 4 + \dots + \infty = -\frac{1}{12}$$

That is all. (proof end)
