

How to Bind Matter to Matter: The Nature of Time

D. Chakalov^Ω
chakalov.net

Abstract

Three characteristics of the human mind are described, which cannot have material correlates. The question of how to bind *mind* to matter, posed in the initial paper from 15 January 1990¹, has been re-examined by scrutinizing the postulate of [locality](#) and the invariant speed of light in “[vacuum](#)”, after the [Michelson-Morley](#) experiment². It is shown that, in the so-called doctrine of *trialism*³, the question of how to bind *mind* to matter depends on the underlying phenomenon of *matter* interacting with *matter*, by following the flow of Time.

I. Introduction

Let me describe the inherent characteristics of the human mind, exhibited in self-identity, human cognition, and mental rotation. It is obvious that any effort to present the human mind along the Marxist-Leninist philosophy (the brain is the [hardware](#) and its mind is the software⁸) leads to contradiction with facts, and will be considered false. On the other hand, any effort to present the human mind as some “mystical agent” capable of acting on brain’s tissue, as suggested in parapsychology, is false as well. In fact, parapsychology is ‘not even wrong’, because its materialistic, Marxist-Leninist alternative⁸ is also dead false. If we have a computing device made exclusively by atoms from the [periodic chart](#), we won’t expect from it to begin studying itself and develop Quantum Field Theory. No parapsychological “ghost” could [animate](#) such system either. We need a breakthrough. How can matter act on **itself**?

Let’s examine the bold facts. Regarding self-identity: when you say, for example, ‘it’s about *me*’ (and usually point to the chest, for unknown reason), you are referring to your *self* that does **not** change in time, as read with a clock. Your brain and body change every millisecond, but **not** your *self*. It is, with respect to a physical clock, time-less and *atemporal*. Also, once you remember a notion at the time you were a toddler, say, ‘corner’, you will never forget it, despite the fact that the neurophysiological correlates of ‘corner’ are kept in your brain, and these correlates will inevitably change, as your body and life experience grow. In this sense, the ‘meanings’ of all concepts kept in your memory, along with your *self* capable of “examining” them by your consciousness, are **invariant** in time. They are simply *atemporal*⁴.

Next, cognition and mental rotation. Consider a simple experiment, which you can perform with your brain⁴, and also try to “rotate” the mental image of a cube⁵. Your brain produces [work](#), which is immediately related to your mental activity. How can we separate the brain, as *Res extensa*, from the mind (*Res cogitans*), and avoid all materialistic⁸ and “psychic” crap?

The only possible solution is to employ the postulates of [locality](#) and the invariant “[speed](#)” of light in spacetime “[vacuum](#)”, known as Aether², and explain how matter acts on **itself** in the course of the global Time: “Everything changes and nothing remains still – you cannot step twice into the same stream” ([Heraclitus](#)). This is the proposed answer to the question posed in the title [above](#). Namely, the [human brain](#) is **self-acting**: only matter interacts with matter. The global Time is *not* “dark”². It has “positive energy density of about 6×10^{-10} joules per cubic meter”⁶ to **act on itself** and execute the elementary step of Time (known as [chronon](#)), in line with the postulate of [locality](#) ([Fig. 2](#)). But what *is* Time, really?

II. The nature of Time

The interpretation of 'time as change' originates from [Heraclitus](#). It has two components, *atemporal*⁴ (global) and physical (local), such that 'time as change' is manifested by a *dual* phenomenon: both 'change in space' (local time) and 'change of space' (global time). Yet physicists bluntly ignore the 'global time' and claim that "there is no dynamics within space-time itself"⁷. Let me try to explain the error in this widely spread but false claim.

Suppose you kick a football and after a few seconds it drops on the playground, as shown in Fig. 1 below. There is a unique geometric point at the [center of mass](#) of the football, and we can imagine (not observe) its consecutive states along the continual (Sic!) trajectory of the 4D football, like snapshots from a movie reel (Fig. 2).

Fig. 1

Fig. 2

Q: What is *binding* the 4D states in Fig. 2? The "intuitively clear" answer is: the football. Yet the football is only the *necessary* condition. The *sufficient* condition is the "colorless" Time endowed with [self-action](#)², exactly like the [human brain](#). Only the *atemporal*, global, and "colorless" Time² can render the 4D 'movie reel' (Fig. 2) by 'change of space' into a *perfect* continuum^{3,4}: the Platonic world⁵ is just like Zen³. It (not "He") *must not* (Sic!) exist in the *physical* world². And since physicists examine only matter⁷, they are *totally* blind of It.

Besides, as I warned against self-destructive theories in cosmology⁹ thirty years ago¹, if we keep only the football and place it at 10^{-36} sec after the "[big bang](#)", there will be **nothing** to kick off the football into its "[inflationary](#)" stage. Only some half-baked "[dark stuff](#)", if any.

To sum up, we endorse the requirement 'only matter interacts with matter' [above](#) and model the human brain as [self-acting](#) system capable of correlating at least [86 billion neurons](#) and trillions of [synapses](#). If people wish to try some materialistic explanation⁸, they will have to invoke some "miracle", such as "[super-computer](#)". Not my cup of tea. I suggested *atemporal* quantum reality thirty-three years ago, on 5 February 1987, to explain the physics of the brain with [EPR-like](#) correlations¹⁰. We also need the doctrine of [trialism](#)³ to eliminate any *direct* link between the brain and its mind (remember, parapsychology is 'not even wrong'), and to suggest the Platonic theory of spacetime² in which the Platonic world (*Res potentia*) is the common source of both matter (*Res extensa*) and mind (*Res cogitans*). It's all about Time.

To understand how the Platonic world⁵ is hidden by the invariant "[speed](#)" of light², let me go back to the [Michelson-Morley](#) experiment and the "quantization" of 4D spacetime continuum: the 'film reel' in Fig. 2 [above](#).

III. What are light quanta?

In 1954, [Albert Einstein](#) wrote to his friend Michael Besso: "All these fifty years of conscious brooding have brought me no nearer to the answer to the question, 'What are light quanta?' Nowadays every Tom, Dick and Harry thinks he knows it, but he is mistaken."

Perhaps the “intuitively clear” picture of **light quanta** as tiny little cannonballs carried by **EM radiation** stems from analogy with **buoys** on ocean surface: once the **water waves** *push* and displace the buoy, it will obtain energy and momentum. As Murphy once noticed, complex problems⁴ have simple, easy-to-understand, wrong answers.

The first puzzle of **light quanta** is that light does *not* propagate in some *physical Aether*.

As Justin Christensen explained (December 26, 2017), “waves travel in water because the water molecules pile up and then push other water molecules out of their way as they try to move downward under the force of gravity, and sound waves move in solids, liquids, and gasses because the atoms in these act like springs that oscillate when compressed or stretched from their equilibrium position. All of these examples only work because there is *something* there for the waves to **travel through** (Sic! - D.C.). If you take away the medium there are no waves.”

Yet we must “take away the medium” — there is no *physical absolute reference frame* — and nevertheless observe propagation of light with *invariant speed*. Can we square the circle?

Yes we can. The film reel, acting as ‘background’ of the 4D football states in Fig. 2, *must not* exist as physical reality². It is *atemporal Platonic* reality⁹ quietly residing “just in the middle between possibility and reality” (Werner Heisenberg⁵).

The second puzzle of **photons** is that they do *not* exist as ‘physical reality out there’, e.g., like the football in Fig. 1 *above*. So, where do the photons come from, and how are they created with a light bulb¹¹? Suppose it creates 1.8×10^{20} identical photons *per second*: where were these photons located *before* they were created? Wrong question. This is not a mundane physical process, such as, for example, flushing a toilet. In the latter case, we can place all events on a timeline: before we flushed the toilet, the water was present in toilet’s reservoir, waiting patiently to be released down the pipe, with particular acceleration and gradually gaining the speed at which it does its final job; then it takes some time to refill the reservoir with fresh water, etc. Nope, photons do *not* exist before they are created from/by the quantum vacuum¹²: the *atemporal Platonic* reality, residing “just in the middle between possibility and reality” (Werner Heisenberg⁵), *must not* exist in the *physical world*². Again, physicists are only interested in matter⁷, and hence are *totally* blind of It.

Thus, Einstein’s question ‘what are light quanta?’ points to the postulate of **locality** and the enduring issue of spacetime continuum¹³. Again, we need a breakthrough.

IV. The topology of spacetime continuum

According to the postulate of **locality**, an object, such as a football (Fig. 1), can be *directly* influenced only by its *immediate* surroundings. This is a metaphysical conjecture aimed at rejecting the metaphysical idea of ‘**action at a distance**’. Can we have our cake and eat it?

Yes we can², by introducing both *necessary* (‘change in space’ as *local* time) and *sufficient* (‘change **of** space’ as *global* time) conditions for the flow of Time (Fig. 2), embedded in the topology of spacetime continuum. Namely, I suggest the *atom of geometry*¹⁴, encapsulating the structure, dynamics, and topology of spacetime continuum⁴. There is no need for any “quantum jumps”⁵. There is no “gravitational” energy *per se*, for the same reason there is no “mental” energy: energy belongs *only* to matter. In both cases, we face specific *distortions* of the physical (local) spacetime, yielding **self-acting gravitalized**⁴ or biological systems⁵.

This is the physics of Life.

IV. Conclusion

It's all about Time. The solution to the puzzle 'how to bind *mind* to matter'¹ depends on the underlying phenomenon of *matter* interacting with *matter*, by following the flow of Time.
