The Assumption Of S. Virgin Mary -Written in Cairo – Egypt –13th April 2020

Abstract

This paper tries to answer 3 questions

(1st Question) Can "The Giant –Impact Hypothesis" provide a complete explanation for the Earth Moon Origin and Creation?

(2nd Question) Can Mars Immigration cause a risk on Earth?

(3rd Question) If Mars cause a risk on Earth, can the human save his life?

(1st Question Answer)

"Mars Immigration Theory Summary":

- Mars original orbital distance was 84 mkm. and Mars had immigrated from it to its current orbital distance 227.9 mkm

- Through Mars Motion from 84 mkm to 227.9 mkm, Mars had collided with Venus and then Mars had collided with Earth also.

- From the Collisions debris Earth Moon was created –and Mars had found its moons. And the rest debris was attracted by Jupiter and created **The Asteroid Belt**

The Giant-impact hypothesis is in consistency with **Mars immigration theory**

But

- Instead of the (Supposed Planet) **Theia**, Mars itself made the collisions- and caused the Earth –Moon Creation -

Mars Immigration Theory solves The difficulties of **Giant-impact hypothesis**:

I. **Why Venus Has No Moon?** – Because Mars moved from 84 mkm to 227.9 mkm and pushed all debris in its motion direction – **far from Venus** – but Earth has greater Mass and the debris lost their motion high momentum – so Earth could attract some debris and create its moon

II. **The Lunar Magma Ocean (LMO) Origin– is Venus** – because the moon is created by 3 planets debris (Venus – Earth – Mars) – So their rocks are found in it

III. **Why The Iron Oxide (Feo) of the Moon= (13%)? Because** The rate (13%) is a middle between Mars rate (18%) and the terrestrial mantle (8%).

IV. **Why Mars diameter (and Mass) are decreased through the history? Because** of the collisions – Mars diameter lost around (5%) (and Mars mass also which causes difficulties for Mars gravitation equation)

V. **Why Mars was immigrated? Because of The Sun Creation Process**

(A Conclusion: Giant-impact hypothesis supports Mars Immigration Theory)

(2nd Question Answer)

1
2 **Mars risk is clear** – because - If Mars has to return to its original point (84 mkm)
3 mars will (almost) collide Earth again
4 The question is
5 Why Mars will return to its original orbital distance (84 mkm)?
6 Because the planet orbital distance depends on the planet diameter (and mass) –So
7 Mars is found Now in its wrong position – and he has (a continuous) reason to return
8 to its original orbital distance
9 But some very great force prevents it...! what's this force?

10 **THE SUN-**

11 **Now if some serious change is happened for the sun life cycle** (basically because
12 we know that Earth is older than the sun life means it's possible to have change in the
13 sun life while the Earth still in life) – **Shortly** – the serious change in the sun life
14 cycle may cause Mars to return to its original orbital distance

15 **Now**

16 If the moon rocks analysis tell us that- Mars had collided with Venus & Earth to
17 produce the Earth Moon – that means- Mars almost will do the same in its return!
18 (some searched for the greatest Earthquake over Earth-That's)

19 **(3rd Question Answer)**

20 The news tell that – **Mars will kill us** - this is the fact!
21 How can the human save his life?
22 By answer the question – **How the matter is created?**
23 The human mind uses light velocity is the thinking process – and because of that- the
24 human sees (the light beam) as matter (mass)
25
26 Someone asked why the subatomic particle behaves as particle after observation and
27 not as a wave? How the observer effects on the observation results?
28 Because the human mind uses the light velocity (0.3 mkm/sec) –so the observer
29 effects on the subatomic particle by alight beam sends from the observer mind and
30 effect on the particle – as the sun rays effect on any particle
31
32 We here again.....! Lorentz length Contraction effect....!!
33 Is Lorentz length Contraction effect a real phenomenon or illusion of measurements?
34 Means – is particle own length contracted (really) by high velocity motion? or that's
35 illusion of measurement?! If so – that means – Lorentz Transformation measure
36 illusion of measurements? Or the particle own length is contracted?! A maze
37 One question can help greatly... **How the matter is created?** the matter is created by
38 an effect of the human mind because the human mind uses light velocity in the
39 thinking process and because of that the matter (which we consider as matter) is NOT
40 matter (really) – it's a light beam we see as matter –
41
42 By the way, the best suitable distribution for the solar planets is the light coherence
43 interference (Young Experiment) where the greatest bright Fringe (Jupiter) occupies
44 the middle point.

1 **1- Mars Immigration Theory Proves**

2 **(1st proof)** The Giant –Impact Hypothesis (The Geological Proves)

3 **(2nd proof)** Planet diameter & orbital distance relationship (Planets Order Analysis)

4 **(3rd proof)** Planet effect on its neighbor

5 **(4th proof)** Mar Immigration Motion Direction

6 **(5th proof)** Mars Immigration results (Mars Diameter decreasing – Asteroid belt Creation)

7
8 **(1st proof) The Giant –Impact Hypothesis (The Geological proves)**

9 As the paper abstract shows how Mars theory is in consistency with The Giant-
10 Impact hypothesis – also Mars immigration theory answers many basic questions face
11 the giant –impact hypothesis –as we have discussed– why Venus has no moon? the
12 theory solves it– because Mars Motion was from the point (84 mkm) to (227.9
13 mkm)– so the direction of Motion is defined - and Mars Motion pushed all debris to
14 move with Mars that made a wave pushed all debris far from Venus – So Venus
15 Couldn't create a moon for it. then these debris lost their high motions momentum
16 when reach to Earth position and because Earth mass is greater than Venus – Earth
17 could attracted some debris and created from them its moon – Now Mars Moons
18 supports this same description because Mars with small mass could attracted 2 moons
19 – How? Because the debris high momentum is lost already, and its motion became
20 so weak even Mars could attracted its moons – the rest debris was attracted by Jupiter
21 and created the asteroid belt.

22
23 Please review **The Giant –Impact Hypothesis** -

24
25 **(2nd proof) Planet diameter & orbital distance relationship (Planets Order Analysis)**

26 Mars immigration theory is born basically based on the planets order analysis

27
28 The planets order analysis shows real puzzles ... for example

29 **(Mercury – Venus – Earth)** this order of planets shows an order in planets diameters,
30 masses and orbital distance – (the order rule is – **A Greater Diameter Or Mass Needs**
31 **A Greater Orbital Distance**) if this order controls all planets so Mars should be the
32 second planet after Mercury - But –

33 **(Jupiter – Saturn –Uranus – Neptune – Pluto)** the outer planets order shows that the
34 rule depends on planet diameter (and not mass because Uranus Diameter is greater
35 than Neptune but less Mass) and the rule is reversed from the previous one i.e. **A**
36 **Greater Diameter Needs A Shorter Orbital Distance** – this analysis refers to that Mars
37 may be found in a wrong position in the planets order and this wrong position causes
38 a disturbance for the planets order – based on this analysis Mars immigration theory
39 can be concluded ... to get **the correct answer** we need to know if **There's A Real**
40 **Relationship Between Planet Diameter And Orbital Distance.** – which we should
41 discuss in more details in next point (No. 4)

42
43
44
45

1 **(3rd proof) Planet Effect On Its Neighbor**

2 I claim any planet effect on its neighbor

3 **Example**

4 687 days (Mars orbital period) = 365.25 days (Earth orbital period) x 1.9

5 687 days (Mars orbital period) = 27.3 days (The moon orbital period) x 25.2

6 But 25.2 degrees = Mars axial tilt and 1.9 degrees = Mars orbital inclination

7 Also 25.2 deg (Mars axial tilt and) = (1.9 deg. Mars orbital inclination) x 13.18 deg.

8 Where

9 The moon motion degrees daily = 13.18 degrees

10 We should not limit our discussion for just Data consistency – let's see its depth

11 Because

12 Mars moves per solar day = 0.524 degrees (=360 degrees /687 days)

13 The value 0.524 degrees = (1/1.9) where 1.9 degrees = Mars orbital inclination

14 That means

15 Mars Data (25.2, 1.9, 0.524 ...etc) depends on the solar day period of time

16 This point still needs more analysis

17 **The direct conclusion is:**

18 ***There's an effect from Earth and Moon on Mars Motion (their neighbor)***

19 Can we prove this effect?

20 Jupiter also effect Mars Data – by the same method

21 **4331 days (Jupiter orbital period) = 687 days (Mars orbital period) x 2 π**

22 Based on that If we find an effect of Mercury data on Mars – can that support Mars immigration theory?

24 But if Mars is immigrated, why (as supposed) mercury still have effect on it? If the Earth Moon is created by some debris from Mars, Venus & Earth, can the 3 planets effect on the Moon Motion? (planet diameter & orbital distance may answer)!

27

28

29 **(4th proof) Mar Immigration Motion Direction**

30 There's one known motion in the solar system which is the planets revolution around the sun – but Mars immigration Motion is a different direction from the revolution around the sun- in more clear words – this motion corresponds to the light motion direction which is sent from the sun to Mars current Point (227.9 mkm)

34 Such motion direction is unknown in the solar system

35 But

36 This motion same direction we have found in Jupiter Energy analysis which shows that there's some motion (for energy from Jupiter Toward Pluto)

38 That tells – Mars immigration Motion direction is not unusual Direction – on the contrary –

40 Please review Jupiter Energy analysis

41 **The Giant-impact hypothesis supports,, Mars Immigration Theory,, (III)**

42 <https://vixra.org/abs/2003.0521>

43

1 **(5th proof) Mars Immigration results which are:**

2 **1- The Earth Moon Creation**

3 **2- Mars Moons Creation**

4 **3- The Asteroid belt Creation**

5 **4- Mars diameter Decreasing (5%)**

6 **5- Mars Mass Decreasing (5%)**

7
8 Simply we have a reason to answer why Venus has no moon but Mars (mass =1/13)
9 has 2 moons?!

10 The fact shows itself clearly – there were no debris around Venus to create a moon
11 for her! Why? but mars has!? Why? because of the Motion Direction

12 Imagine a car moves from the point 84 mkm to 227.9 mkm –so the car creates a wave
13 pushes all debris in the same motion direction

14 That's simple and acceptable explanation...

15

16 **Simply – again – the fact shows itself**

17 The gravitation equation works correctly only with Jupiter and Saturn where...

18

19 $((\text{Saturn orbital distance})^2 / (\text{Jupiter orbital distance})^2) = (\text{Jupiter Mass} / \text{Saturn Mass})$

20

21 If Mars Mass is increased with 5%.....So

22

23 $((\text{Mars original distance } 84 \text{ mkm})^2 / (\text{Mercury orbital distance } 57.9 \text{ mkm})^2) = (\text{Mars}$

24

25 $\text{Mass} / \text{Mercury Mass})$

26

27 Also the gravitation equation tells us that, Mars orbital distance was 84 mkm – Mars

28

29 was the Mercury neighbor and had to immigrate from its original orbital distance
Why had to immigrate? (this will be discussed in point No. 6 of this paper) but now
let's analyze Mars displacement 144 mkm...

29

2- The Solar Planets Order Analysis

2-1 The Planets Order Analysis

The Planets order shows almost an order depends on the planets diameters and not masses!

- The order (Mercury – Venus – Earth) shows that greater diameter (or mass) need greater orbital distance (contradicting the gravitation equation!)

- The order (Jupiter – Saturn – Uranus – Neptune – Pluto) shows that greater diameter (but not mass) needs shorter orbital distance (the order depends on Planets diameters because Uranus diameter is greater than Neptune but less mass)

- The order still tells more data ... (Jupiter – Saturn – Neptune – Uranus – Pluto) this order is done for the outer planets based on their masses – but their days periods are ordered based on their masses – the greatest mass has the shortest day period.

- Mars immigration theory started from this analysis – because if Mars was the second planet after Mercury – the inner planets order will be in perfect form as following (Mercury – Mars – Venus – Earth) the order in diameters- masses and orbital distances...

- The basic question... does the planets order depend on their diameters or masses?

The answer is with kepler *Let's see it in following:*

"Kepler thus assumed that the volumes of the planets were proportional to their distances to the sun and the quantity of matter they contained to the square root of this distance, so that planetary densities varied inversely as square root of the orbital radius and is this ad hoc way be could reproduced his third law (T^2 varies with a^3) and absorb into physical Astronomy" "From Eudexus to Einstein A history of Mathematical astronomy" (page 198-199) C.M. Linton – Cambridge university Press...

- The order simply depends on both the diameter and the mass – why? because the planet material density is a function of its distance to the sun!

- This strange idea may give some light how explain the solar planets order

2-2 Newton Gravitation Equation

Why The Solar Planets Order doesn't follow the gravitation equation?

$$\frac{(\text{Saturn orbital distance})^2}{(\text{Jupiter orbital distance})^2} = \frac{\text{Jupiter Mass}}{\text{Satrun Mass}} = 3.4$$

We remember this equation...

This equation tells that J

Jupiter and Saturn follow perfectly the gravitation equation

We can't find any other planets follow the gravitation equation...

Spite of that ...the gravitation equation proves clearly the following:

1- Mars original orbital distance was 84 mkm

2- Mars original Diameter was 7070 km

So the gravitation equation strongly support "Mars Immigration Theory"

Let's see that in following

$$\frac{(\text{Mercury orbital distance } 57.9 \text{ mkm})^2}{(\text{Mars original orbital distance } 84 \text{ mkm})^2} = \frac{\text{Mars Mass } 0.668}{\text{Mercury Mass } 0.33}$$

(Equation Error 3.4%)

Mars registered Mass = 0.642×10^{24} kg (when Mars diameter =6792 km) ...so

Mars Mass will be = 0.668×10^{24} kg (when Mars diameter =7070 km)

So Mars Mass and Mars orbital distance with Mercury Mass and orbital distance all are controlled by the gravitation equation (a similar to Jupiter and Saturn)

Just If

(1) Mars orbital distance =84 mkm

(2) Mars Mass = 0.668×10^{24} kg when Mars diameter =7070 km

Conclusions

(1)

If Mars didn't immigrate from its original orbital distance (84 mkm) to its new orbital distance (227.9 mkm) – the planets order will be created based on the gravitation Equation without any disturbance –

Shortly – *Mars Was Mercury Neighbour*

(2)

Mars immigration was a great catastrophe in the solar system could destroy it – but because Saturn and Jupiter unify their powers to save the solar system – the solar planets still in life

2-3 Mars Diameter Decreasing

Did Mars diameter decrease through the history?

Yes – it was 7070 km and becomes 6792 km (**The Difference 4.1%**)

How to prove that?

Based on the diameter analysis we have 2 proves as in following:

(1st Proof)

The planets order – "**Mercury – Mars – Venus – Earth**" – Perfect order

(2nd Proof)

(1) Mercury Orbital Distance 57.9 mkm = Mercury Diameter 4879 km x 10^9

(2) Earth Orbital Distance 149.6 mkm = Earth Diameter 12756 km x 10^9

(3) Saturn Orbital Distance 1433.5 mkm = Saturn Diameter 120536 km x 10^9

(4) Mars (Original) Orbital Distance 84 mkm = Mars (original) Diameter 7070 km x 10^9

For more details please review

The Solar Planets Order Still Shows More Puzzles

<https://vixra.org/abs/2004.0086>

3- The Observer effect on the observation process

3-1 Lorentz Transformation Analysis

Let's again consider Lorentz Transformations-

Lorentz Transformations tell us that, Particle length is contracted and its mass is increased with this particle high-velocity motion!

Also the Particle time and distance are changed because of this same motion-

Einstein & his friends dealt with time and distance and give us Space-time geometry

I Interest For Particle Own Nature – as I understand – Lorentz Transformations tell that Particle Length & Mass are changed with high velocity motion

If this contraction is a real effect on particle nature or just illusion of measurements!

This question we analyzed many times – and I concluded that it's **A Real Effect**

Why? Because

(1st) Empirical results prove these features (length contraction- mass increasing)- and

We need to protect the physical experimental measurements credibility- means we attribute any properties to any particle based on experimental resultsAnd

(2nd) If the particle real (and correct) data is found when this particle motion relative to me = zero, that means I'm **The Universe Reference Point.**

So The questions are clear –

(1st Question)

Is Lorentz Length Contraction effect a real phenomenon occurred for the particle own nature or just illusions of measurements?

It's A Real Phenomenon (the same conclusion for Particle Mass Increasing)

(2nd Question)

Why?? Why particle data is changed with this particle high velocity motion?

Let's use the following example....

Suppose 2 observers travel with light velocity – So

The First Observer Velocity =0.3mkm/Sec = The Second Observer Velocity

How does each observer see the other?

No difference in velocity between both- What does special theory of relativity tell us?

The velocity is relative and no meaning for "the absolute velocity"- so we don't care for their velocities relative to ours – we care for their velocities relative to each other

– no difference in velocity – Each observer will see the other as a matter (Particle)!

We see both of them as light beams!

This is my idea – we have **an observer travels with light velocity in our mind** – each light beam we see as a matter – and any motion slower than light velocity we

see as light beam – that means the universe is consisted of motions basically and **The Matter Is Created As A Side Product.**

That explains why Particle data changes with high velocity motion! this particle original data is defined based on this particle ordinary motion relative to light velocity (our minds) - **Now this particle travels with high velocity which changes the basic conditions** -Let's provide more analysis in following...

1 **3-2 The Dualism Nature**

2 Why the Particle has 2 natures (Wave And Particle)?

3
4 Imagine we have a light velocity in our mind –so our mind works by $c = 0.3 \text{ mkm/sec}$

5 Now

6 We have another motion – this motion for particle or wave we don't interest-
7 it's a motion

8 And this motion can be accelerated

9
10 When the motion acceleration be so high and can make this motion velocity = light
11 velocity we will see this motion as **A Particle**

12
13 And when the acceleration is so weak and make this motion velocity very less than
14 light velocity – so we will see this motion as **A Wave**

15 So particle double natures are found as a result of our mind effect on the universe
16 different motions –

17 **We Need To See This Universe Is Consisted Of Motions Basically – We Need To**
18 **See The Matter As Side Products Where The Motions Are The Basic Players**

19
20 **Some Objections**

21 (1)

22 Some one will tell that – there's no any empirical proof that the human mind uses
23 light velocity specially because the electric pulses velocity in human brain and body
24 is so slow relative to light velocity!

25 It's true – because light travels in liquids with velocity less than light velocity in
26 vacuum – that means – we need only a piece of vacuum in human mind to restore this
27 Pulses the light velocity –

28 (2)

29 Do we understand the experimental results and measurements which we have in labs?
30 Einstein told us that we didn't understand the time and space values which we have
31 measured for hundreds of years before him – where these values were considered
32 absolute values, in fact they are relative – so the measurements aren't enough but
33 need also a theoretical explanation behind

34
35
36
37

3-3 The relativistic Effects Nature

We know there are relativistic effects produced by high velocity motions– and there's light beams in every where around us – means – usually there are relativistic effects around us

The question simply is

How does a relativistic effected system cooperate with non-relativistic system?

Special Theory of Relativity (SR) gives us some incomplete vision –particle length is contracted by this particle high velocity motion- very good – how the new contracted length will behave in the system?

We see the universe moves in perfect organization – means there's a cooperation between all factors – now there are relativistic and non relativistic dimensions – these all dimensions are cooperated with each other – how does that happen?

The relativistic effects are not –at all- strange effects for the human mind – the relativistic effects are similar to other geometrical effects- and the relativistic effected system is cooperated geometrically with the non effected system

Here the geometrical basics are produced –

That means

When we study this cooperation with enough deep we will gain 2 important results

- (1) We will know which geometry can be applied for the universe motions
- (2) We will have explanations for this geometry axioms – because it's NOT a human creation geometry – it's the universe geometry and each axiom is found because of its geometrical necessity

I want to say

Just the relativistic effects discovery proves that the human mind uses light velocity in thinking process –

That because

SR gives us a broken vision – 2 different frames – and SR gives us no geometrical rules how these pieces can be unified to create one system – but the one system is found already in the universe – so that – means – there's no broken here!

This is similar to the following argument –

Particle electromagnetic properties can't predict its mechanical properties – so we live in 2 different worlds – the matter world and the mind world!

It's wrong – we live in one world- how to prove? The chemical interactions prove

One world – that means –Particle Electromagnetic properties MUST predict its mechanical properties otherwise we have an absent part in our book

Please review

Is There A Contradiction Between SR And GR? <http://vixra.org/abs/1912.0441>

Lorentz Length Contraction Is A Real Phenomenon & Not Illusion Of Measurements

<http://vixra.org/abs/1911.0468>

1 **4- Can Titius Bode Law Disprove Mars Immigration Theory?**

2 The question here is – If Mars had immigrated from its original orbital distance why
3 Bode law use Mars Current orbital distance normally as the other planets without
4 disturbance?

5
6 Why Titius- Bode law couldn't predict Neptune orbital distance? If the law predicted
7 all other planets, why can't predict Neptune distance?
8

9 Let's ask another question

10 Why there's no more equations which are followed by all planets as kepler Laws?

11 I have many new equations – but no one is used for all planets! Why?

12 Bode law also another example for this same puzzle?! An Equation works for 6 or 7
13 planets but not for the rest! We have to suppose that, the 6 planets followed the same
14 one equation by pure coincidences! (even Bode law was considered as pure
15 coincidence!)

16 This is NOT an easy question.... The answer pure coincidence will be removed...

17 We need a real explanation....! What's going on here?

20 We deal with a classified order had a disturbance for some reason –

21 Many equations and analysis show that Mars was exceptional in its data

22 There's a disturbance caused by **Mars immigration**

24 But – what then- the life is stopped! No- the life is continuous

26 So –Mars will find some configuration in its new orbital distance – the planet still in
27 life and does its geometrical job

28 Now we have 2 different stories – in the ancient one Mars was in 84 mkm – and in
29 the modern one Mars is in 227.9 mkm from the sun – and Mars in its new orbital
30 distance creates its configuration with the other planets

32 Shortly –

33 Why Titius–Bode law shows no difficulties with Mars (current) orbital distance
34 (227.9 mkm)? Because of 2 reasons

36 (1st) Mars created its configuration in its new orbital distance (227.9 mkm)

38 (2nd) because Mars current orbital distance (227.9 mkm) is (an obligatory
39 displacement) defined by the solar system geometry, means, the displacement is
40 found by a general cooperation between all planets which support the configuration
41 for Mars current orbital distance (227.9 mkm)

42 Let's try to prove that as possible in following

43 **Mars Displacement Equation**

44
$$25920 \text{ mkm} = 144 \text{ mkm} \times 180$$

45 - A light with known velocity (0.3 mkm/sec) during a period 86400 seconds (a solar
46 day) travels a distance = 25920 mkm

- 1 - Also – all solar planets move together during (a solar day) a distance =17.75 mkm
2 and so during 1461 solar days they move a distance =25920 mkm
3 - If 180 degrees is a geometrical value in the solar system – so the value 144 mkm
4 must be an obligatory one
5 Also
6 - $180 \text{ mkm} \times 0.8 = 144 \text{ mkm}$ where (0.8 degree = Uranus orbital inclination)
7 Now the rate 0.8 is found frequently in the solar system – for example
8 - Earth Jupiter distance = 0.8 x Jupiter orbital distance –
9 - I want to say that – the rate 0.8 defines many distances relative to each other – this
10 effect is one of Uranus important effects on the solar system geometry – please
11 review it
12 - In this point we need to show that the value 144 mkm was defined by 2 ways at
13 least
14 o (1st) by the planets diameters (Mars and Venus Diameters)
15 o (2nd) by the general solar system geometrical structure –which tell us that –
16 Mars had 2 choices only which were to stay in 84 mkm or to move to 227.9
17 mkm and no more chances are available because the value 25920 mkm
18 control all data
19 o So the question is, Why Mars had to immigrate? This question will be
20 discussed in the next point (Point No.6)

21 Discussion

22 My equations which show that **Mars Data was exceptional** –
23 Titius–Bode law doesn't refer to this fact (that Mars is exceptional) but instead –
24 Titius–Bode law refers to Neptune as an exceptional -

25 *I want to say that*

- 26 - Mars immigration caused a disturbance for the solar planets order – and this
27 disturbance is seen in the equations breaking points (and because of that we have
28 no more general laws as kepler- but we have broken equations- as Titius–Bode
29 law or my next equations)
30 - The breaking point isn't necessary to be found always with Mars – Because Mars
31 created a configuration with its neighbors, so the breaking point can be transported
32 to another planet (as happened with Neptune in Bode law)
33 - So my equations and Bode law supports each other, they show a breaking in the
34 equations and inconsistency for the data order and because these equations are
35 followed by some planets (but not all planets) so we can conclude that there's
36 some order is confused here which results these equations breaking points.
37 - i.e. **Kepler Laws were so rare because of Mars Immigration Theory**
38

39 For Full Discussion Please Review

40 Can Titius Bode Law Disprove Mars Immigration Theory?

1 **5 – The Greatest Earthquake in the Earth history**

2 December 2012 had many mysteries

3
4 (1st) this image is seen frequently on media predicting that on
5 3rd December (Mercury- Venus- Saturn) will be perpendicular
6 on the 3 Great Pyramids Heads – which is a cycle repeated
7 only once each **2737 years!**

8
9 (2nd) Mayan Calendar long Cycle continuous for more than
10 5000 years – is completed on 21st December 2012 – someone
11 told the pyramids works as an O'clock for Mayan Cycle!

12
13 (3rd) A prediction for the greatest Earthquake hit the whole Earth was spreading for
14 months before December 2012!

15 Nothing happened and every thing is forgotten now

16
17 I have studied the solar system Geometry from this date (November 2012) till now
18 trying to know what truth behind all these mysteries

19 **Mars Immigration Theory** provides a very similar earthquake

20 And

21 Mars Immigration theory is supported strongly by the "**Giant –Impact Hypothesis**"
22 in addition to many other proves –

23
24 So what we still need to know is:

25 - Why Mars had immigrated from its original orbital distance (84 mkm) to its new
26 current one (227.9 mkm)? i.e. **What event had caused Mars immigration?**

27
28 My answer is that

29 **The Sun Creation Process had forced Mars to immigrate.**

30
31 This answer causes even more difficulties –it tells us – Mars Displacement from the
32 Point (84 mkm) to the point (227.9 mkm) depends on **The Sun Life Cycle**
33 i.e.

34 Mars Displacement is NOT a motion in one directionbut

35 **It's Go & Return Motion –**

36 If (really) the sun creation process caused Mars to immigrate from its original orbital
37 distance – that means – some (serious) change in the sun may cause Mars to return to
38 its original orbital distance (and collide with Earth Again) – that's **The Earthquake.**

39 Simply

40 Mars Immigration Theory tells us that – there's an astronomical reason for the
41 warning issued in **2012** – it was not an empty year and not an empty warning but the
42 knowledge was so weak and no one got the news!

43 **Please review**
