Lethality, Velocity and Acceleration of COVID-19 Contamination in the World and 20 Selected Countries (April-24-2020)

Valdir Monteiro dos Santos Godoi (valdir.msgodoi@gmail.com)

The objective of this paper is to introduce a study relative a mathematical modeling of coronavirus contamination, knowing some current numbers first, by COVID-19 pandemic.

Initiating with data of 20 countries and total values relate to the world, is possible to note that the United State of America is the worse country with relation to the current coronavirus contamination (COVID-19). Probably United Kingdom is not providing your data on recovered patients correctly, with regularity, because your lethality coefficient is abnormally high: 96.34 %.

For table 1 we are defining

Active Cases = Confirmed Cases - Death - Recovered Cases,

Resolved Cases = Death + Recovered Cases.

Lethality $\% = 100 \times Death / Resolved Cases$.

We are not using Lethality $\% = 100 \times Death / Confimed Cases$.

Korea South (2.75 %), Israel (3.28 %), Germany (4.96 %), China (5.61 %), Iraq (6.62 %), Iran (7.79 %) and Russia (9.95 %) have the lowest lethality rates in Table 1, less than 10%.

For table 2 we are defining

Velocity 1 = Confirmed Cases 1 - Confirmed Cases 2,

Velocity 2 = Confirmed Cases 2 - Confirmed Cases 3,

Acceleration = Velocity 1 - Velocity 2.

We also use

Confirmed Cases 1 as the number of Confirmed Cases of April-24-2020, Confirmed Cases 2 as the number of Confirmed Cases of April-23-2020, Confirmed Cases 3 as the number of Confirmed Cases of April-22-2020.

From Table 2 we see that Spain, Italy, Iran, China, Portugal, Japan, Korea South and Cuba are with negative acceleration, i.e., declining the speed of growth of confirmed cases, while US, France, Russia and Brazil, and the world in general, are in strong case growth, especially the US.

All primary data was extracted from the Johns Hopkins University website.
